DATA SCIENCE & AI

01. Who We are

01. Motivation

01. Overall pipeline

02. Where We are

02. Face Emotion Recognition(FER)

FER : 이미지나 영상 속 얼굴을 분석하여 사람의 감정 상태를 자동으로 예측하는 Computer Vision Task

Figure 1. FER-2013 Sample Training Set Images.

02. Dataset

- FER2013, RAF-DB etc 등 여러 개의 데이터셋을 합침
- Perceptual hashing
 - 이미지가 시각적으로 동일하면 동일한 해시값이 추출
 - 이를 통해서 중복되는 이미지와 동일한 이미지에 대해서 잘못된 라벨링을 하는 것을 제거
- Face confidence
 - MTCNN을 통해서 face confidence를 구해 0.9 이하의 저품질 얼굴 제거

02. Dataset

angry	4479
disgust	1766
fear	1361
happy	12185
neutral	9521
sad	8531
surprise	5150
합계	42993

angry	4089
disgust	1725
fear	1310
happy	11926
neutral	9245
sad	8241
surprise	2776
합계	41312

03. We are best

03. ResNet : Transfer Learning

- ResNet 9 from the scratch로 훈련 -> 82.18%
 - ResNet 18 from the scratch로 훈련 -> 79.93%
- 성능을 높이하고자 tranfer learning 사용 → face pretrained model이 성능 GOOD

03. ResNet : condition injection

- landmark : 얼굴에서 의미 있는 특징
- landmark가 FER task에 중요하다고 생각하여 이를 활용
- landmark를 조건으로 활용하여 injection (FiLM)

03. ResNet : graph neural network

- Landmark에서의 특징은 CNN에서 충분히 추출 → landmark 간의 관계를 반영
- 엣지로 노드들 관계를 파악하기에 용이한 Graph neural network (GNN)

03. ResNet : graph neural network

03. ResNet : minority class accuracy

- 하지만 전체적인 성능은 87.12%로 좋게 나왔지만 데이터 수가 적은 disgust와 fear에서는 아주 성능이 좋지 않게 나옴

03. EfficientNet-B2: Transfer Learning

- Compound Scaling

1. Depth (Layer)

2. Width (Channel)

3. Resolution (해상도)

를 균형있게 키워 성능을 높인 모델

- Scale = B2 (9.9M parameters, 성능 대비 효율적)

- Weighted Cross Entropy

03. EfficientNet-B2: Transfer Learning

- 2-phase training:

기존에 큰 데이터로 잘 pre-trained

되어있는 weight 이용

Phase 1)

backbone freeze,

classification head only

Phase 2)

fully unfreeze, fine-tuning

(learning rate ↓, 미세 조정)

03. EfficientNet-B2: ImageNet VS AffectNet

pretrained data		Test Acc
ImageNet	일반 객체	81.20%
AffectNet	얼굴 표정 이미지	85.25%

03. EfficientNet-B2: Weighted Cross Entropy VS Focal Loss

Loss		Test Acc
Weight Cross Entropy	class 불균형 해소	85.25%
Focal	쉬운 sample의 dominance 억제	85.75%

03. EfficientNet-B2: Class 불균형 해소

기법	Test Acc
Class-conditional Augmentation	82.10%
Oversampling	83.15%
Label Smoothing	85.01%

03. EfficientNet-B2: Final Model

1. Model Architecture

- Compound Scaling Model (EfficientNet-B2, 9.9M parameters)

2. Transfer Learning

- AffectNet pre-trained
- 2-phase training

3. Optimization & Regularization

- Weighted Cross Entropy
- Label Smoothing

04. Color Matching

04. Color Matching - Emotion Probability

Emotion Probability

- Model: EfficientNet-B2
- Dataset: AffectNet Pretrained
- Performance: Validation ACC 85.01%
- Output: 7-Class Softmax

04. Color Matching - Condition Score

Condition Score

$$\text{Condition Score} = \sum (\text{Prob} \times \text{Weight})$$

- 감정별 심리 가중치 부여
Positive(+): Happy(+50), Surprise(+20)
Negative(-): Sad(-20), Fear(-30), Angry(-35), Disgust(-40)
- 정규화 (Normalization):
Min-Max Scaling: 0~100점 척도 변환
직관적인 배터리 Indicator UI 제공

04. Color Matching - Condition Score

Weight for Condition Score (Heuristic Method)

04. Color Matching - Synthesis

Synthesis: Emotional Color + Personal Color

- Emotional Color
추출된 감정을 바탕으로
심리적 균형을 돕는
베이스 컬러 도출

- Today's Color
퍼스널 보정된 감정 기반 색상

- Personal Color
얼굴 고유 특징 추출 색상
(머리 색깔, 눈 색깔, 피부톤)

04. Color Matching - Emotional Color

1. Emotional Color

감정 → 심리보완색 매핑

분노 (Angry)

#90E0C3

쿨 민트 — 진정 / 냉각

슬픔 (Sad)

#FFB3A7

소프트 코랄 — 활력 부여

공포 (Fear)

#D8C3A5

웜 샌드 — 안정 / 온기

놀람 (Surprise)

#1A237E

딥 네이비 — 평정심

혐오 (Disgust)

#DCD0FF

클린 라벤더 — 정화

행복 (Happy)

#FFFACD

크림 아이보리 — 긍정

중립 (Neutral)

#36454F

차콜 — 신뢰 / 전문성

- Kaya, N., & Epps, H. H. (2004). "Relationship between color and emotion: A study of college students." *College Student Journal*.

04. Color Matching - Emotional Color

1. Emotional Color

Top3 Emotional Color Blending

04. Color Matching - Personal Color

2. Personal Color

HTML Color Codes

- MediaPipe FaceLandmarker: 478개 3D 랜드마크 기반 초정밀 부위 추적
- Target Area: 피부(양볼 20pts), 눈동자(홍채 10pts), 머리카락(BBOX 필터링)
- Algorithm: K-Means Clustering (k=3,4) 적용
- Color Space: RGB 픽셀 → CIE LAB 색공간 변환 (Hex-code)

04. Color Matching - Personal Color

2. Personal Color: 16-Color Grid Classification

- X축 (온도/Tone): 피부 LAB공간의 B값 기준 (True Cool ~ True Warm)
- Y축 (명도/Lightness): 피부·머리·눈의 L값 가중 평균 (Very Light ~ Very Dark)
$$L_{avg} = 0.7 \cdot L_{skin} + 0.2 \cdot L_{hair} + 0.1 \cdot L_{eye}$$
- Result: 16가지 맞춤형 Personal Color 타입 도출
- Adjustment: 타입별 고유 LAB 보정량 부여

04. Color Matching - Synthesis

Synthesis: Emotional Color + Personal Color

$$L_{new} = L_{base} + \text{light_adj}$$

$$B_{new} = B_{base} + \text{temp_adj}$$

05. User Interface

05. User Interface

05. User Interface

06. Conclusion

06. Conclusion

Transfer Learning

- ImageNet 대신 대규모 얼굴 데이터 가변 사전학습된 가중치를 사용하여 얼굴 구조에 특화된 feature를 FER에 효과적으로 전이

Graph Neural Network

- 얼굴 랜드마크를 그래프로 모델링하여 랜드마크 간 공간적 관계 및 기하학적 구조 정보 보강
- 더 정밀한 랜드마크 사용 시 성능 향상 가능

Condition Injection

- GCN 임베딩을 ResNet 중간 레이어에 FiLM방식으로 주입. landmark 관련 조건을 효과적으로 conditioning
- 더 복잡한 조건 정보에는 cross-attention 구조 고려 가능

Class Imbalance

- Disgust/Fear 데이터가 약 1/8 수준으로 심한 불균형 존재
- class weighted loss, focal loss, oversampling, label smoothing 등 적용 → 소수 클래스 성능을 향상. 다만 전체 정확도는 소폭 감소함을 보임
